## **What's New in the QV-AutoCam?**

Casio QV-3000i Digital Camera Software V3.2.1 QV-AutoCam is the superior alternative to the free software which comes with Casio cameras (QV-Link or PhotoLoader). It's easier to use, fetches faster, and can help you organize and catalog your picture collection. And because QV-AutoCam is designed specifically for Casio cameras it understands their special features, and

can compensate for their weaknesses. QV-AutoCam lets you use your QV-3000 as a Webcam, or you can take time-delay photos using the automatic camera. A lot of pictures taken with digital cameras can benefit from some sharpening. QV-AutoCam's new Sharpen control gives you a high-quality sharpen without increasing noise. QV-AutoCam now supports the new Casio cameras that use PhotoLoader software, QV-2000, QV-3000, QV-5500 and QV-8000. QV-AutoCam can communicate via serial or USB links. You can now use QV-AutoCam to capture pictures from any DCF (Design Rule for Camera System) compliant camera memory card. You need a card-reader that mounts the card as a disk drive volume, with it's own drive letter Here are some key features

of "QV AutoCam": □ Fetch and Save all your pictures with a single click, or simply by plugging the camera into the PC when running Automatic Capture □ Browse your pictures once you've saved them on disk □ Print multiple pictures on a page □ Find your pictures using keywords □ Set up a Live WebCam (This function is not supported by all cameras) □ Take time-delay photographs and then turn them into a movie or AVI (This function is not supported by all cameras) Limitations: □ 30 days trial Important note for Windows 2000 users: Do not install Casio's USB driver that comes with the camera on Windows 2000 systems. It can render your system unbootable.

=====

==== - Disable any notification when

the camera was offline. (11/10/09)

=====

==== - Support for Casio QV-5500  
(digital video camera) (11/10/09)
